SOVEREIGN VAULT NETWORK

Legal & Legislative Templates Suite

Production-Ready Frameworks for State Legal Tender Authorization & Cross-Border Mutual Protection Frameworks

Document ID: SVN-LEG-TMP-2026-V1

Date Replicated: October 2026

Prepared For: Executive Director & Legislative Pilot Sponsors

Role Assignment: AI Chief of Staff & Strategy Lead

Classification: Confidential Internal Operations Directive

DOCUMENT 01: MODEL MULTI-STATE INTERSTATE COMPACT TEMPLATE

ARTICLE I — PURPOSE AND FINDINGS

The participating sovereign states find that macro-economic instability and inflationary pressures necessitate the creation of a parallel, full-reserve transaction infrastructure. Pursuant to Article I, Section 10, Clause 1 of the United States Constitution, states reserve the absolute legal right to declare gold and silver coin legal tender in payment of debts. This Compact establishes a unified, cross-border system where digital depository certificates representing 100% physically backed asset allocations can safely circulate as transactional instruments among the citizens of member jurisdictions.

ARTICLE II — LEGAL DEFINITIONS AND THE FULL-RESERVE BAILMENT MANDATE

As used in this Compact, a 'Digital Depository Certificate' represents an explicit legal bailment of physical commodities held in trust within a certified state-chartered depository facility. Under no circumstances shall these tokens be construed as debtor-creditor deposits or traditional financial bank assets.

Section 2.1. Absolute Bailment Protection [The Poison Pill]: Every asset allocation transaction executed through the decentralized clearinghouse network shall be executed as a contract of bailment. The title to the physical commodity asset (Gold, Silver, or defined Energy Units) shall remain permanently vested in the token holder. No member state, financial institution, or clearing hub node shall possess legal authority to lease, hypothecate, lend, fractionally clear, or utilize said physical assets for any form of fractional-reserve credit expansion or financial leverage.

ARTICLE III — CROSS-BORDER VAULT MUTUAL PROTECTION AND ENFORCEMENT

Section 3.1. Sovereign Seizure Immunity: Physical assets domiciled within a designated state depository (such as the Texas Bullion Depository or Wyoming Sovereign Hub) operating under this Compact shall be immune to any out-of-state regulatory freezes, foreign judgments, or federal administrative asset seizure mandates that contradict the full-reserve bailment protections established herein.

Section 3.2. Uniform Auditing Interface: Member states agree to grant equal enforcement recognition to the automated cryptographic Proof-of-Reserves (PoR) protocols. Real-time physical metrics collected via vault weight scales, laser telemetry, and data nodes shall be legally valid for statutory reporting across all compact jurisdictions.

DOCUMENT 02: ALTERNATIVE TENDER BILL DRAFT (STATE LEGISLATIVE PILOT)

A BILL TO BE ENTITLED AN ACT

To authorize and regulate full-reserve digital depository certificates backed by physical specie and energy units as recognized state legal tender; to provide structural integration guidelines for state depositories; to establish complete tax exemption status for parallel transaction clearing; and to outline enforcement parameters preventing fractional reserve manipulation.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE:

SECTION 1. SHORT TITLE.
This act shall be known and may be cited as the 'Sovereign Specie and Sound Money Transaction Act.'

SECTION 2. LEGAL TENDER DECLARATION AND TAX ISOLATION.

(a) Full-reserve digital certificates verified by the State Depository infrastructure and backed by physical gold, silver, or specific energy basket reserves shall be recognized as legal tender within this state and may be used to satisfy all public and private debts.

(b) Capital Gains Tax Exemption: The exchange, purchase, sale, or transactional liquidation of a digital depository certificate within the decentralized clearinghouse system shall not trigger any state capital gains taxes, transaction fees, or consumption surcharges. For state accounting purposes, the certificate represents a receipt for physical asset property ownership and is not a financial security or speculative asset.

SECTION 3. STATE INSTITUTIONAL DEPOSITORY PLUMBING INTEGRATION.

(a) The State Treasurer is hereby authorized and directed to establish secure Application Programming Interfaces (APIs) linking the state's accounting systems and revenue management pipelines directly with the certified decentralized clearinghouse nodes.

(b) Public Revenue Acceptance: Citizens, corporate entities, and authorized institutions may remit all state taxes, property levies, processing fees, and financial dues directly via the transactional certificates. These allocations shall settle instantaneously to the state's sovereign vault reserve accounts without conversion into fiat currency plumbing.

SECTION 4. CRIMINAL PENALTIES FOR FRACTIONAL BREACHES.

Any individual, officer, platform operator, or certified gateway broker who knowingly issues a digital certificate unbacked by a corresponding 100% physical asset reserve allocation inside a certified vault node commits a felony of the second degree, punishable by statutory financial asset reclamation and immediate revocation of corporate operation privileges.
